## Installation instruction

Installation of the theme is quite simple. Basically, in order to properly install the theme with mega menu module, it is necessary to follow these steps:

1. Deactivate Magento cache and compiler
2. Upload all files from the module zip archive to the root directory of your store
3. Setup the theme from admin > system > configuration > design with the following configuration:
  - a. Package: "default"
  - b. Themes [Default]: j2t

## Module configuration

All aspects of configuration have been made easy in order to make the configuration process fast and efficient. We added to the configuration area, WYSIWYG color selection tool as well as preview elements and configuration grids.

The configuration area is accessible from admin > system > configuration > J2T Expand Theme.

## Header configuration

Within header, few configuration elements are available:

- Static menu: when set to "yes", menu will stay on top when you will scroll down to bottom of your site instead of being hidden
- Search location: it is possible to set search location at left, right or center area.

## Main site configuration

This configuration area will allow you to define color of the following elements:

- Text
- Link (and link hovered)
- Price (as well as crossed price and special price)
- Menu bar (as well as hovered and selected)
- Menu bar link (as well as hovered and selected)

## Button color

This defines the color of all buttons of your store. Configuration can be defined for:

- Background color
- Hovered background color
- Text color
- Hovered text color

## Font property

In this configuration area, it is possible to define the font aspects of your store. Google fonts can be configured and used for headings. Preview of Google fonts is available in order to have a better idea of the fonts you would like to use on your store, before actually using it.

## Page property

This configuration section allows general configuration of your store pages:

- “Max page width” defines the actual maximum width your store can have
- Background color
- Content background color
- Background image
- Type of background usage (position, repeat, scroll)
- Custom CSS entry, which allows usage of any CSS instruction
- “show contact tab” on product page and define the phtml file to be used (default is: contacts/form.phtml)
- “split additional information” on product page tab area. Allow to see all additional attributes on separate tabs
- Subtitle can be show under main product title by specifying the appropriate attribute name, which must be an attribute with the following configuration:
  - « Used in Product Listing » : « yes »
  - « Visible on Product View Page on Front-end » : « no »
- Show shadow effect while hovering product list item
- Show tags on “new” and/or sale’s items

## Home Page Elements

In this configuration area, you can easily configure your home page main slider and product sliders:

- Main slider can be show with the following CMS code: `{{block type="j2texpantheme/homeslider" template="page/html/home_slider.phtml"}}`
- Products’ slider CMS code will be `{{block type="j2texpantheme/homeproducts" template="page/html/home_products.phtml"}}`
- Manufacturer slider: `{{block type="j2texpantheme/manufacturers" template="page/html/manufacturer_list.phtml"}}`

## Menu configuration

The configuration area is accessible from admin > system > configuration > J2T Mega Menu.

On configuration area, you will be able to inject any menu entry with or without dropdown CMS elements.

### J2T Mega Menu

Defaults

Menu Entries

Add & Remove Items from menu area.

Right Menu Items

Title	Block CMS	Action	Dropdown Type	
Contacts	CMS Contact	contacts	Default	<input type="button" value="Delete"/> <input type="button" value="Add value"/>

▲ Define menu entries on right area of the menu. Action will contain either Full URL or Magento URL code such as: contacts, checkout/cart, etc. CMS Block will be shown in drop down menu and URL will be link to be clicked on. Leave CMS blank for no dropdown entry.

Menu can also be altered with the following configuration:

### Furniture (ID: 10)

General | J2T Mega Menu | Display Settings | Custom Design | Category Products | Associated Blog Posts | Associated Blog Categories

J2T Mega Menu

Dropdown Type: Default Dropdown

Top CMS Block: Select a static block

Right CMS Block: Select a static block

Bottom CMS Block: Select a static block

Left CMS Block: Select a static block

Submenu Option: Not relevant

Tags

Text	Color	Hover Color	Text Color	Text Hover Color	Action
New	#D5D5D5	#C6C6C6	#000000	#000000	<input type="button" value="Delete"/>
Deal	#E1E1E1	#B9B9B9	#000000	#000000	<input type="button" value="Delete"/>

▲ Tags will be shown the on top of main menu entry or next to it when on lower levels. Leave color blank to use default css values.

## Automated process

### Brand logos

All logos must be place in media/brands directory on your server, in lower case format and with .png extension.

File names must not contain any special characters. Any special character will be replaced by space and character with accent will be replaced by the equivalent one without accent. The theme will automatically look after the files according to the attribute name defined in Magento admin.

## Country flag for language selection

Country flags are located in skin/frontend/default/j2t/images/locale/ with locale code as file name. If one store scope is configured to use US\_en as locale language, loaded flag will be en.png.

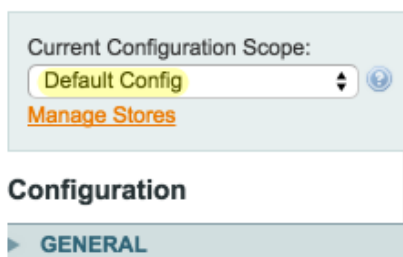

You can update this file by any file of your convenience with the following dimensions: 16px x 11px.

## Import/Export tool

With J2T Expand Theme, it is possible to save the configuration in a file. This file can be used as backup and be imported later on.

The export and import can be done on “default” or store scopes.

In order to properly export/import your current configuration, you may want to select the appropriate scope according from the following:

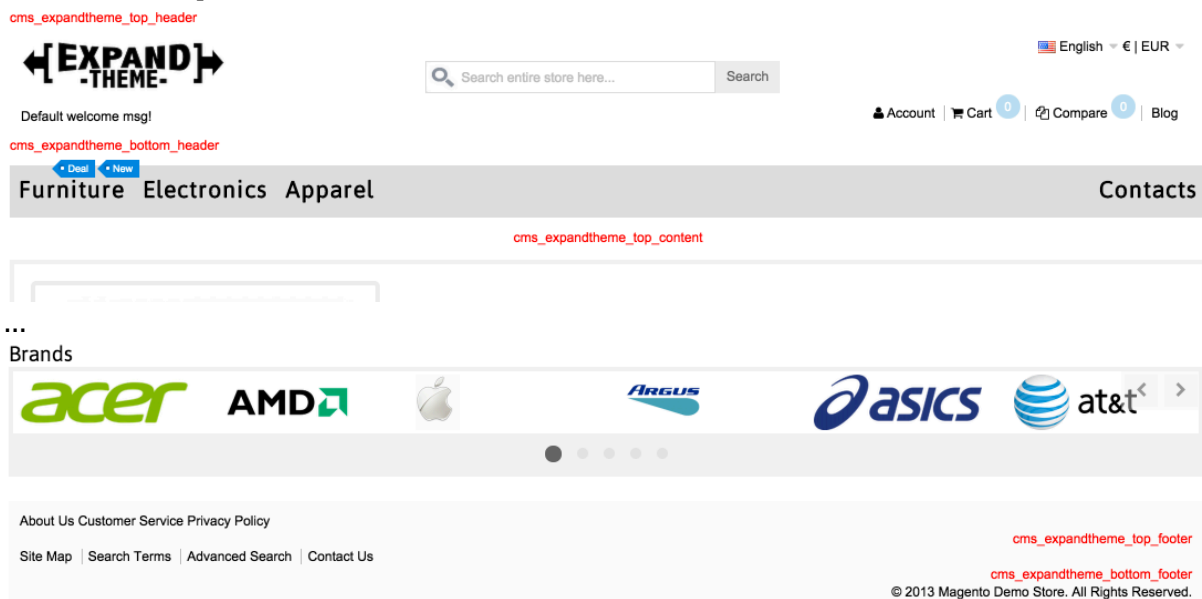

## Custom CMS block's insertion

### All pages

It is possible to insert CMS blocks on all pages with the following name:

- cms\_expandtheme\_top\_header
- cms\_expandtheme\_bottom\_header
- cms\_expandtheme\_top\_content
- cms\_expandtheme\_top\_footer
- cms\_expandtheme\_bottom\_footer

cms\_expandtheme\_top\_header

Default welcome msg!

cms\_expandtheme\_bottom\_header

cms\_expandtheme\_top\_content

cms\_expandtheme\_top\_footer

cms\_expandtheme\_bottom\_footer

## Product page

On product page, the following CMS blocks can be added:

- cms\_expandtheme\_product\_top\_right
- cms\_expandtheme\_product\_bottom\_right
- cms\_expandtheme\_product\_content\_area

Additional Information

Product's Review

The Nokia 2610 is an easy to use device that combines multiple messaging options including email, instant messaging, and more. You can even download MP3 ringtones, graphics, and games straight to the phone, or surf the Internet with Cingular's MEdia Net service. It's the perfect complement to Cingular service for those even remotely interested in mobile Web capabilities in an affordable handset.

#### Design

Compact and stylish, the 2610 features a candybar design sporting a bright 128 x 128 pixel display capable of displaying over 65,000 colors. Most of the phone's features and on-screen menus are controlled by a center toggle on the control pad. A standard hands-free headphone jack is provided, as are volume control keys, and there's even a "Go-To" button that can be assigned by the user for quick access to favorite applications. Lastly, the included speakerphone allows you to talk handsfree, and because the phone sports an internal antenna, there's nothing to snag or break off.

## Widgets

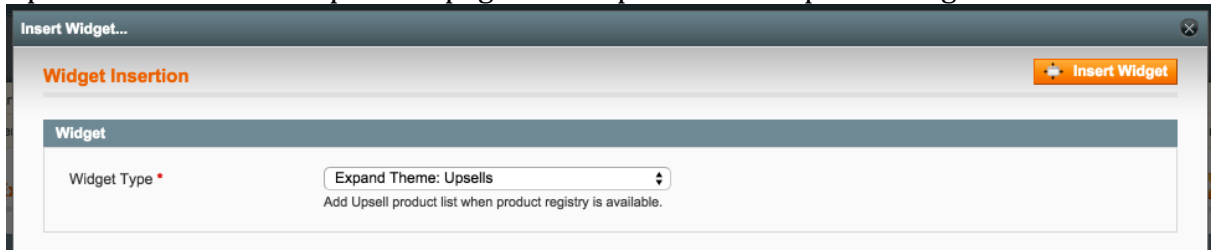

### Brand's logo on product page

In order to be able to show brand logo on product page, it is possible to use an expand theme widget:

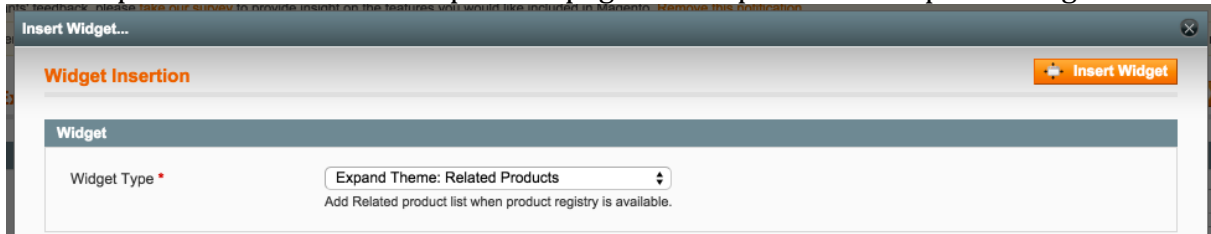

### Upsell product

Upsells can be show on product page with expend theme upsells widget.

### Related product

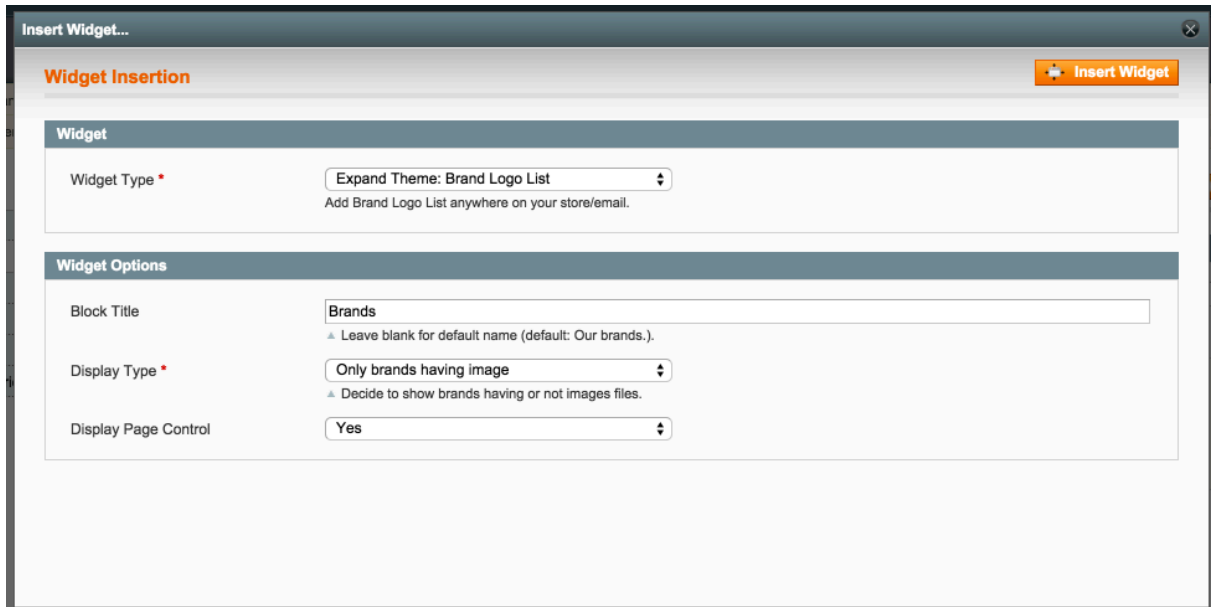

Related product can be show on product page with expend theme upsells widget.

## Brands on pages

It is possible to show all the brands of your store on any location of your store by using the brand widget.

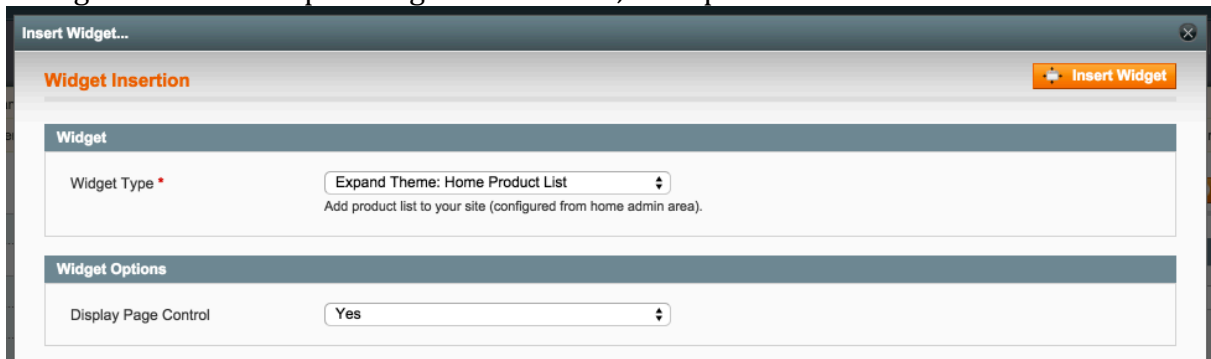

The screenshot shows the 'Insert Widget...' dialog box. The title bar reads 'Insert Widget...'. The main area is titled 'Widget Insertion' and contains an 'Insert Widget' button. Below this, there are two sections: 'Widget' and 'Widget Options'. In the 'Widget' section, the 'Widget Type' is set to 'Expand Theme: Brand Logo List' with a dropdown arrow. Below it, the text reads 'Add Brand Logo List anywhere on your store/email.'. In the 'Widget Options' section, there are three fields: 'Block Title' is set to 'Brands' with a text input field and a note '▲ Leave blank for default name (default: Our brands.)'; 'Display Type' is set to 'Only brands having image' with a dropdown arrow and a note '▲ Decide to show brands having or not images files.'; and 'Display Page Control' is set to 'Yes' with a dropdown arrow.

Block Title, Display Type and Display Page control can be defined.

## Home product list

This widget is used to show the list of products defined within Expand Theme module configuration. If multiple categories are used, multiple lists will be shown.

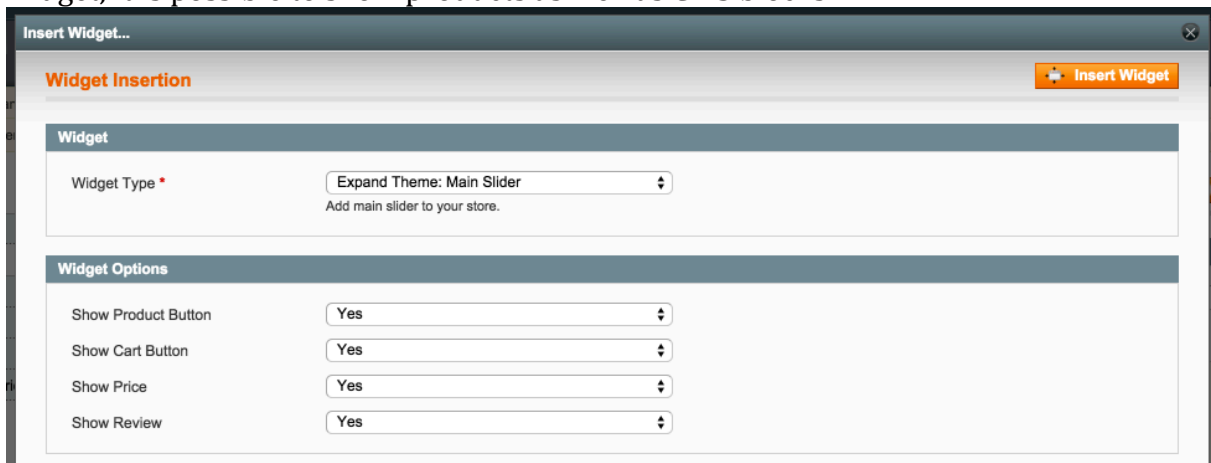

The screenshot shows the 'Insert Widget...' dialog box. The title bar reads 'Insert Widget...'. The main area is titled 'Widget Insertion' and contains an 'Insert Widget' button. Below this, there are two sections: 'Widget' and 'Widget Options'. In the 'Widget' section, the 'Widget Type' is set to 'Expand Theme: Home Product List' with a dropdown arrow. Below it, the text reads 'Add product list to your site (configured from home admin area.)'. In the 'Widget Options' section, there is one field: 'Display Page Control' is set to 'Yes' with a dropdown arrow.

With this widget, it is possible to show page control or not.

## Main slider

The main slider widget can be configured within the theme configuration page. With this widget, it is possible to show products as well as CMS blocks.

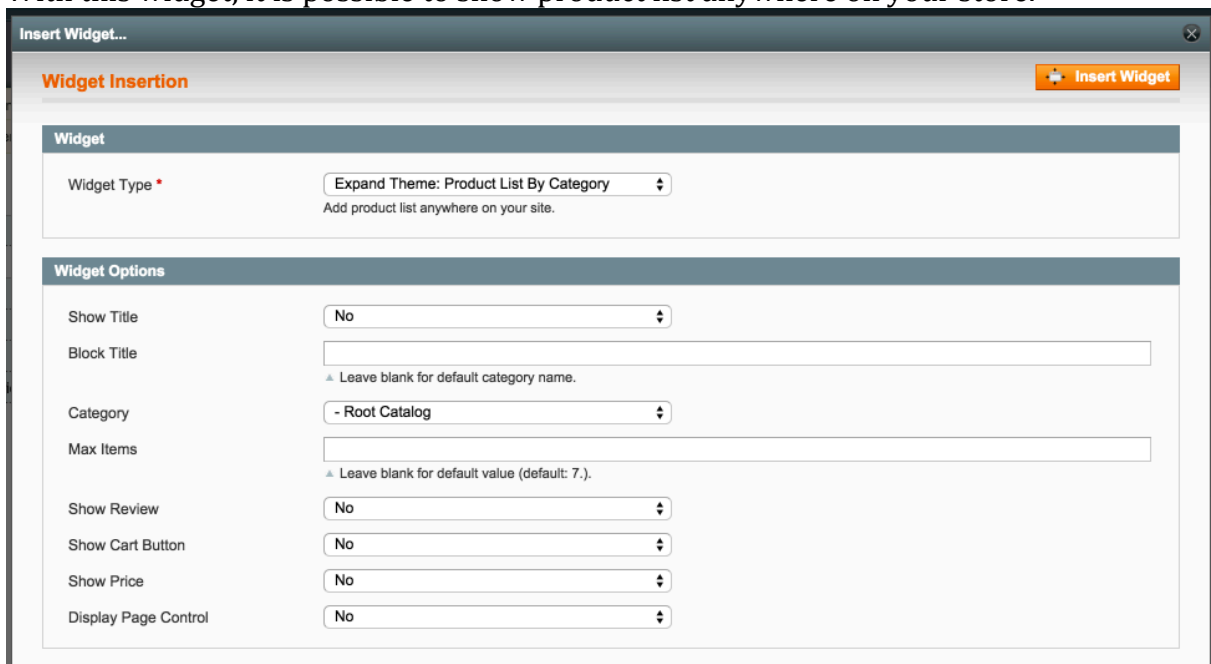

The screenshot shows the 'Insert Widget...' dialog box for the 'Main Slider' widget. The 'Widget' section has 'Widget Type' set to 'Expand Theme: Main Slider' with the description 'Add main slider to your store.' The 'Widget Options' section includes four dropdown menus, all set to 'Yes': 'Show Product Button', 'Show Cart Button', 'Show Price', and 'Show Review'. An 'Insert Widget' button is located in the top right corner.

Widgets configuration allow to show/hide product buttons, show/hide add to cart button, show/hide prices, show/hide reviews.

## Product List By Category

With this widget, it is possible to show product list anywhere on your store.

The screenshot shows the 'Insert Widget...' dialog box for the 'Product List By Category' widget. The 'Widget' section has 'Widget Type' set to 'Expand Theme: Product List By Category' with the description 'Add product list anywhere on your site.' The 'Widget Options' section includes: 'Show Title' (No), 'Block Title' (text input with a note 'Leave blank for default category name.'), 'Category' (- Root Catalog), 'Max Items' (text input with a note 'Leave blank for default value (default: 7).'), 'Show Review' (No), 'Show Cart Button' (No), 'Show Price' (No), and 'Display Page Control' (No). An 'Insert Widget' button is located in the top right corner.

Widgets configuration allow to show/hide title, define block title, define category to be used, max items to be show on the slider at once, show/hide product buttons, show/hide add to cart button, show/hide prices, show/hide reviews, show/hide page control.
